Importing Python VM

Linux

Table of Contents

1. Install VirtualBox	2
2. Install Python VM	5

edureka!

Install VirtualBox

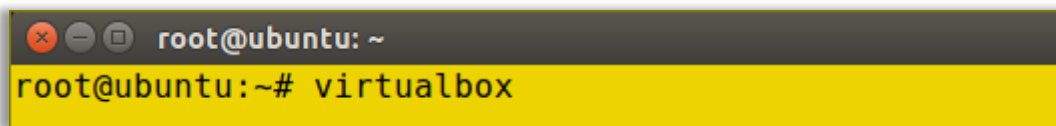

Step 1: You have to go to Ubuntu Software Center.

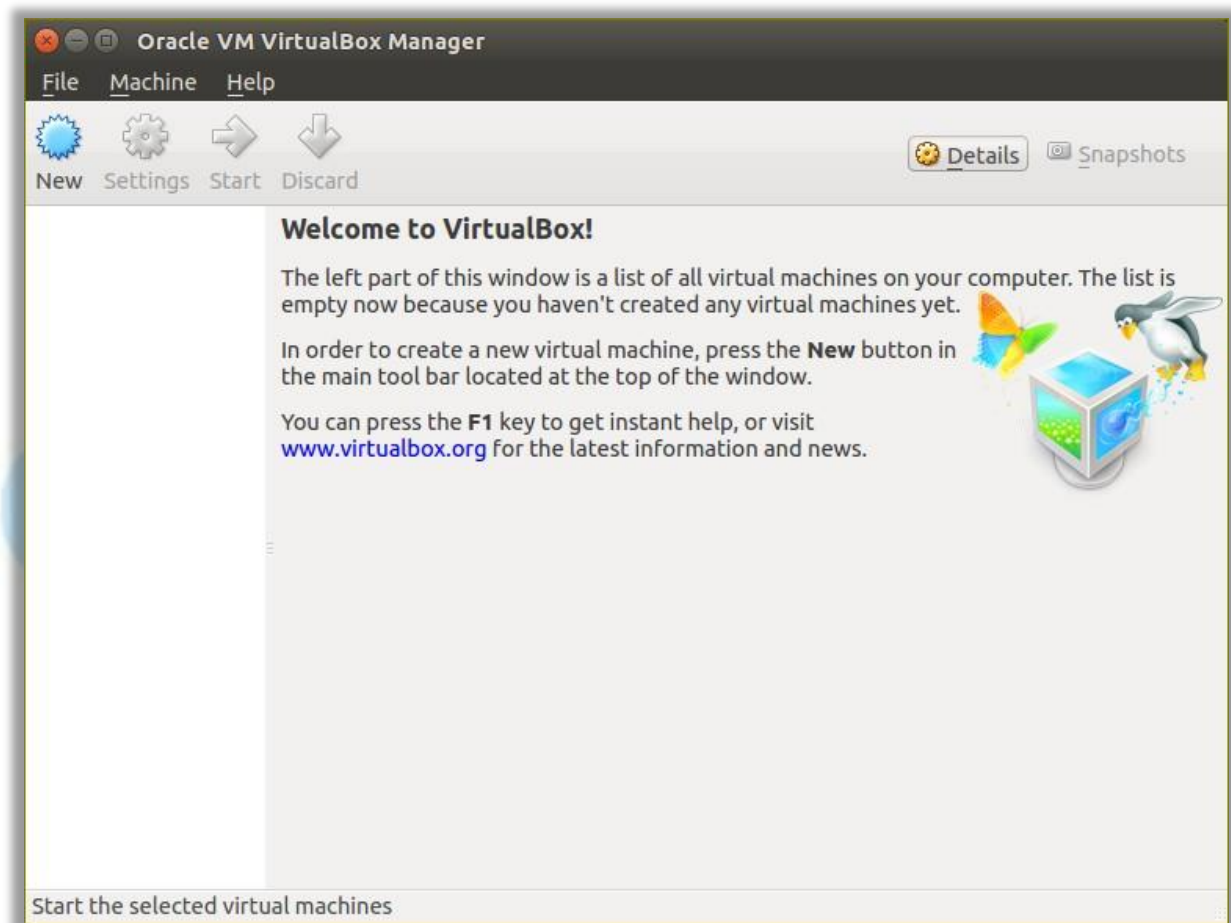

Step 2: Select “VirtualBox” and click “Install”

Step 3: Open terminal and execute virtualbox.

```
root@ubuntu: ~  
root@ubuntu:~# virtualbox
```

Step 4: Go to “File” menu and click on “Import Appliance”.

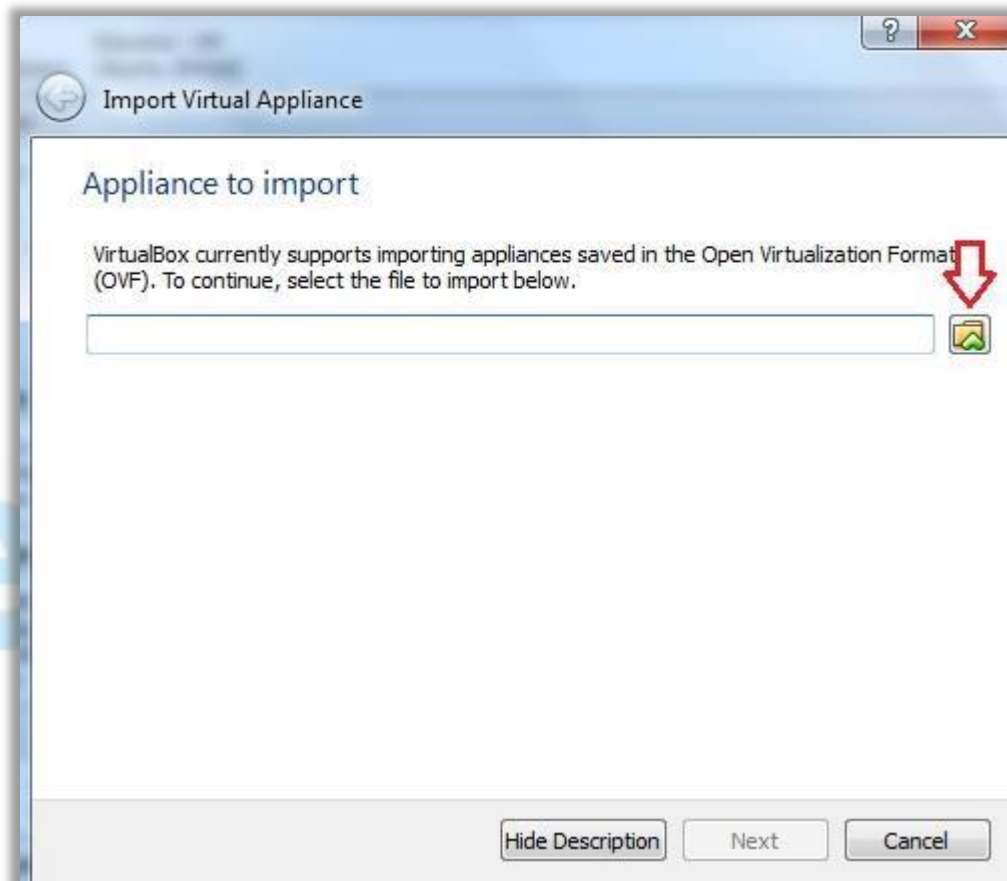

edureka!

Install Python VM

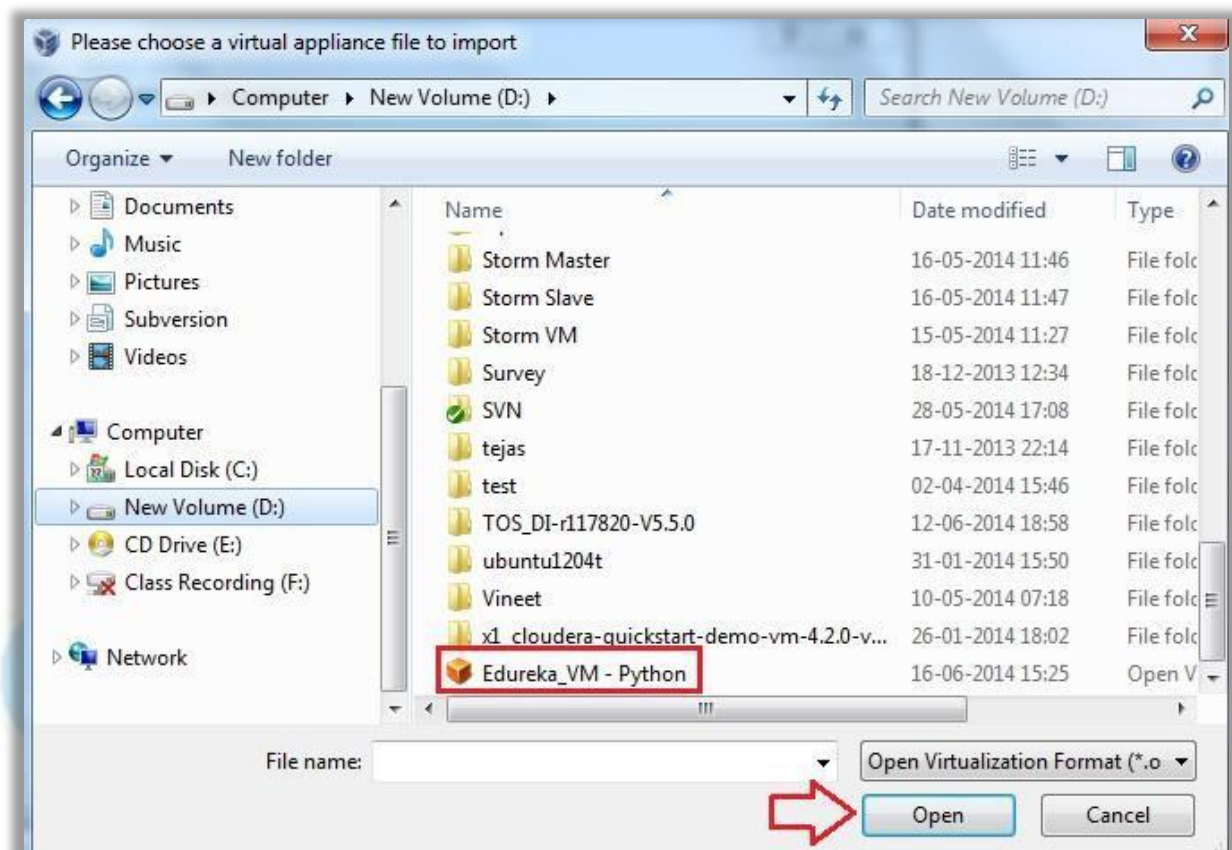

Step 1: Download Edureka_VM-Python from this link:

http://share.edureka.co/pydio/data/public/edureka_python_vm

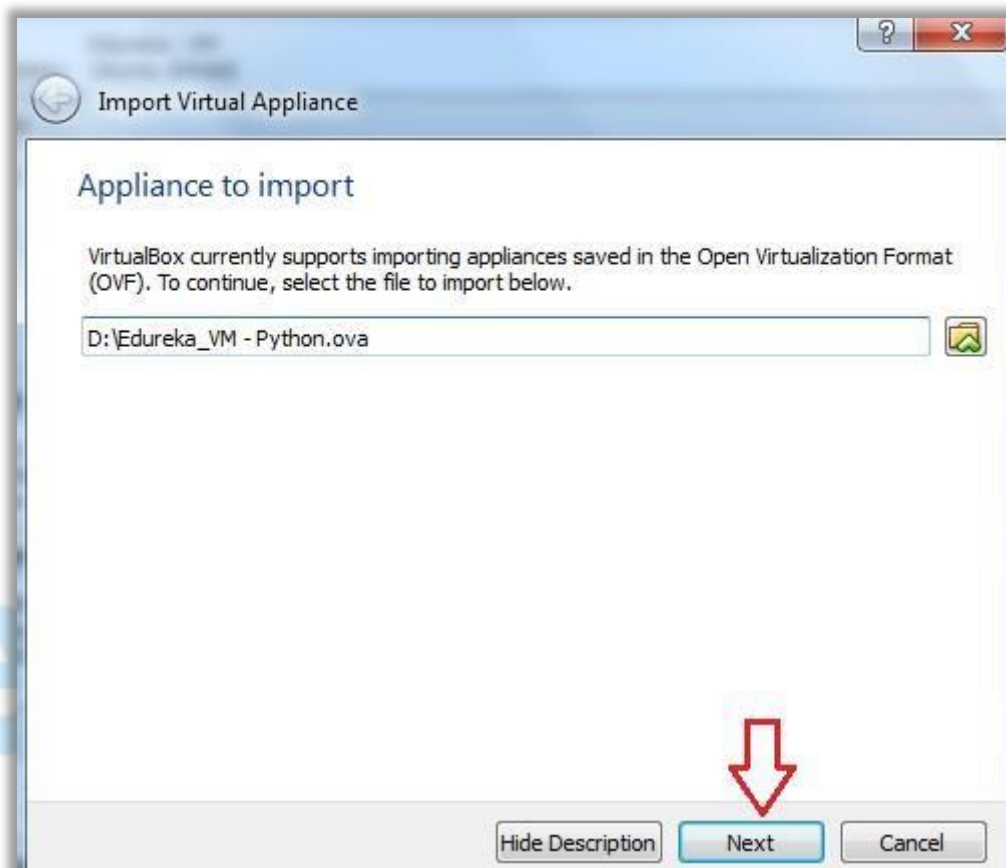

On Import Virtual Appliance box click on the file menu to import Open Virtualization format file.

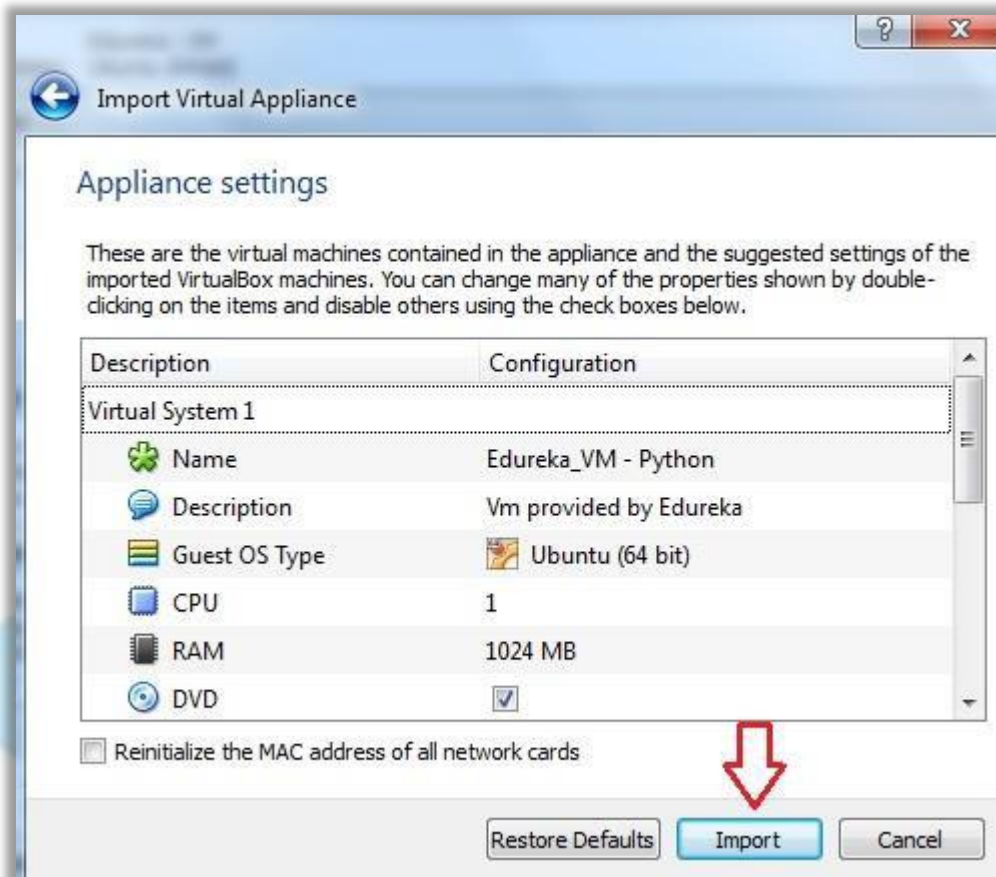

Step 2: Select “Edureka_VM-Python” and click on “Open”.

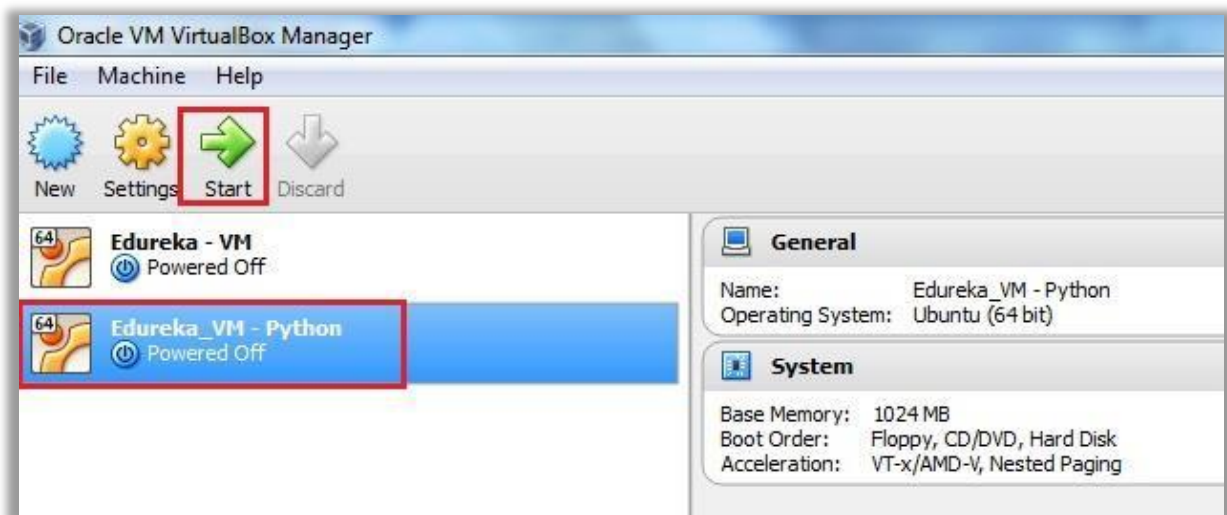

Step 3: After selecting the .ova file click on “Next”.

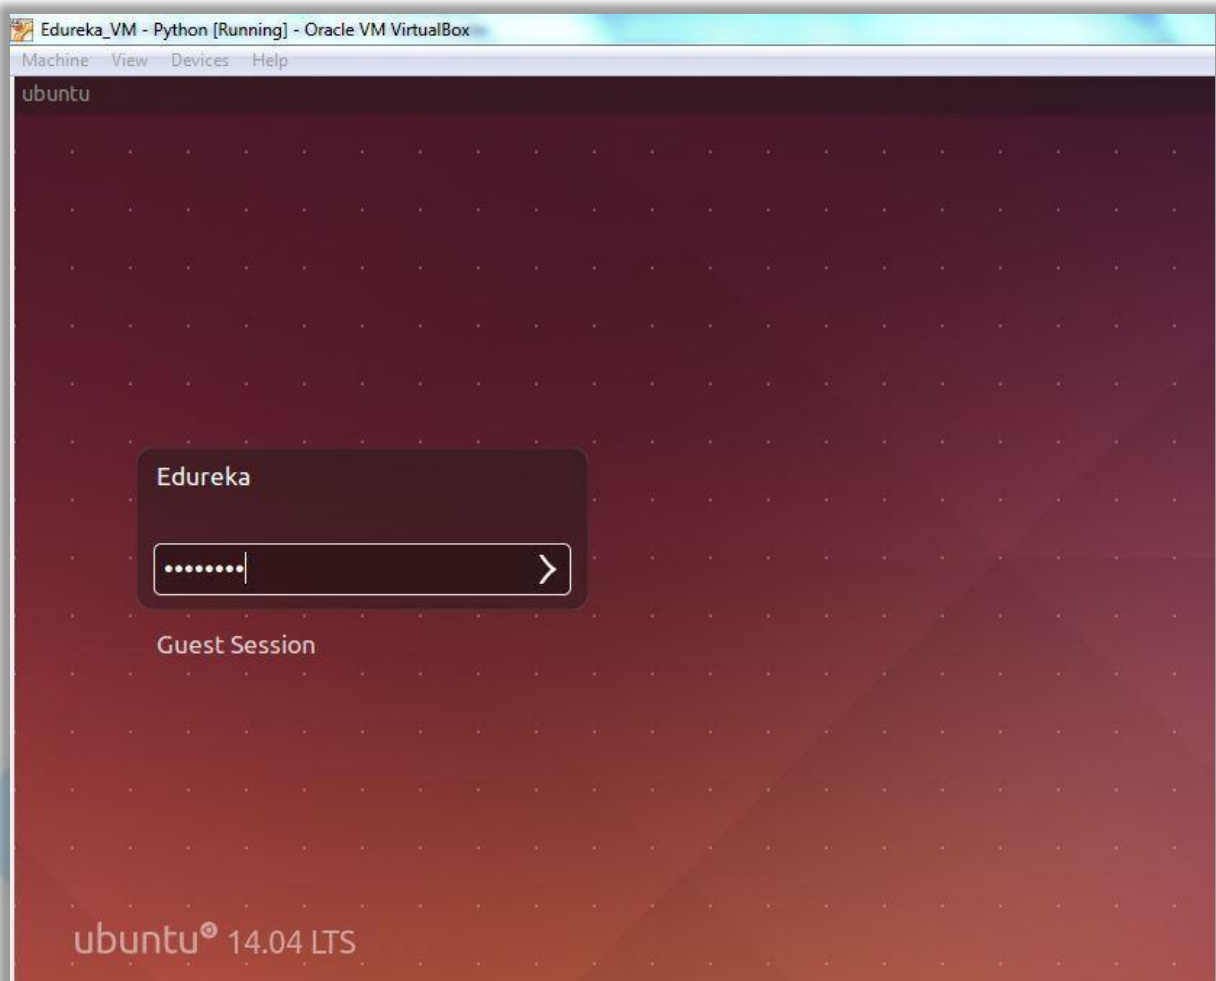

Step 4: Click “Import” on Appliance settings box.

Step 5: Select “Edureka_VM – Python” and click” Start”.

Step 6: Python VM will start on Oracle VM VirtualBox. You will have to write **edureka** in password field.

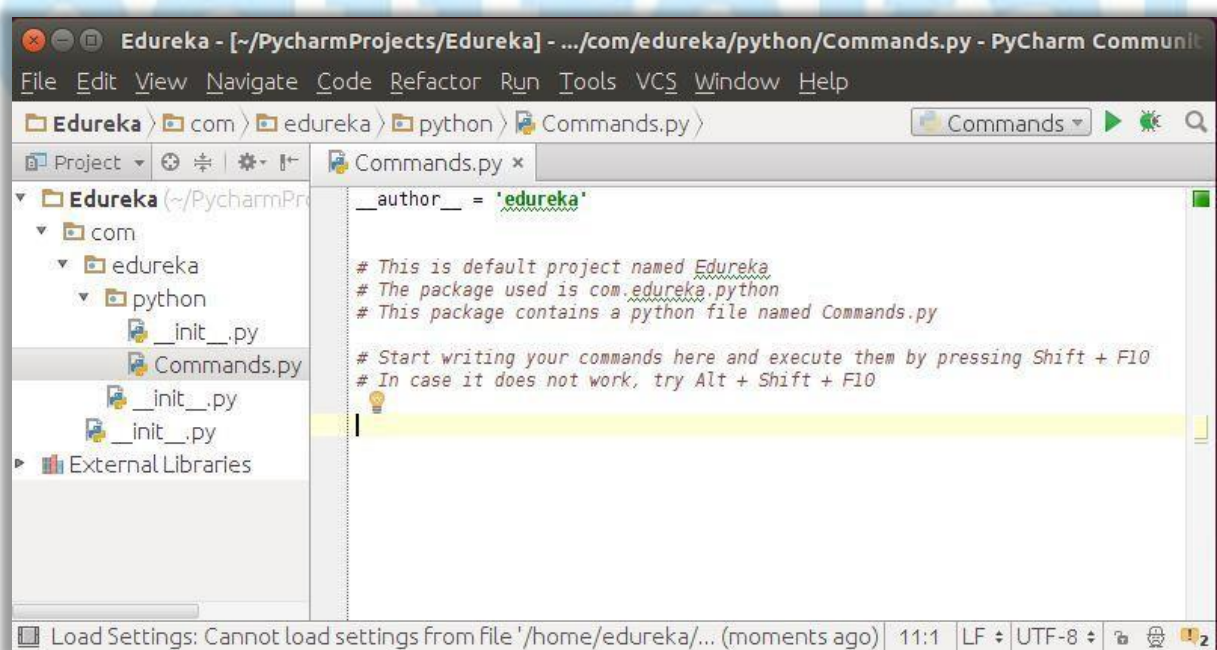

Step 7: Above screen will appear on which you will have to click on Python VM which will be available on the left hand side menu.

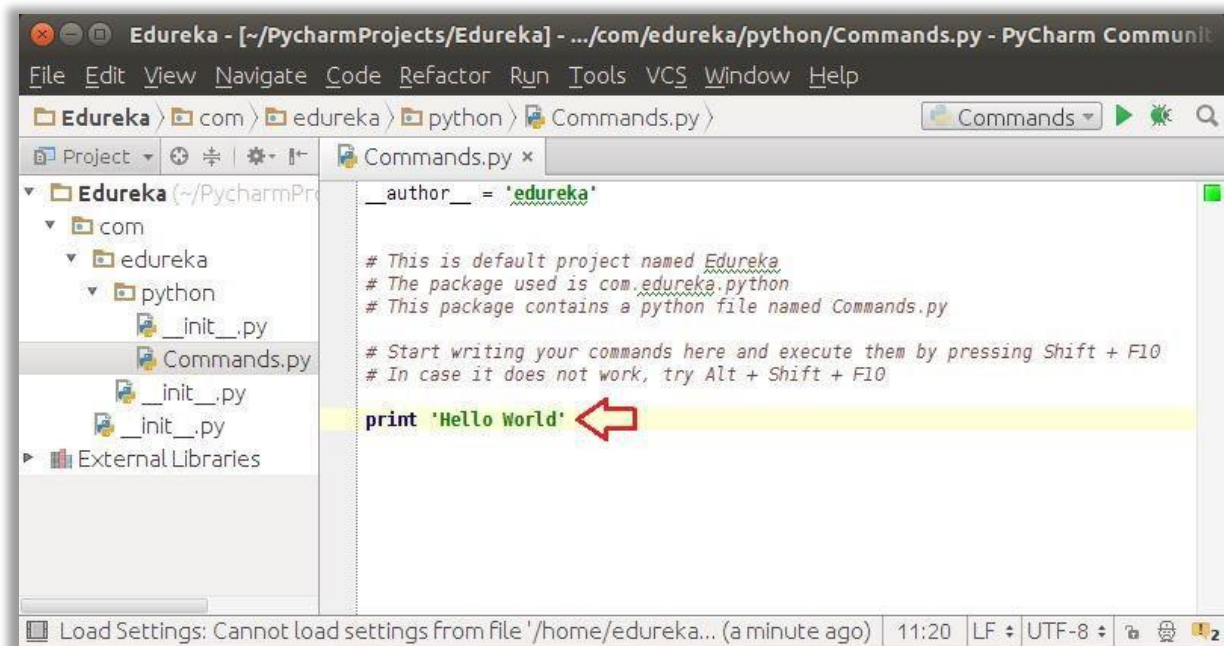

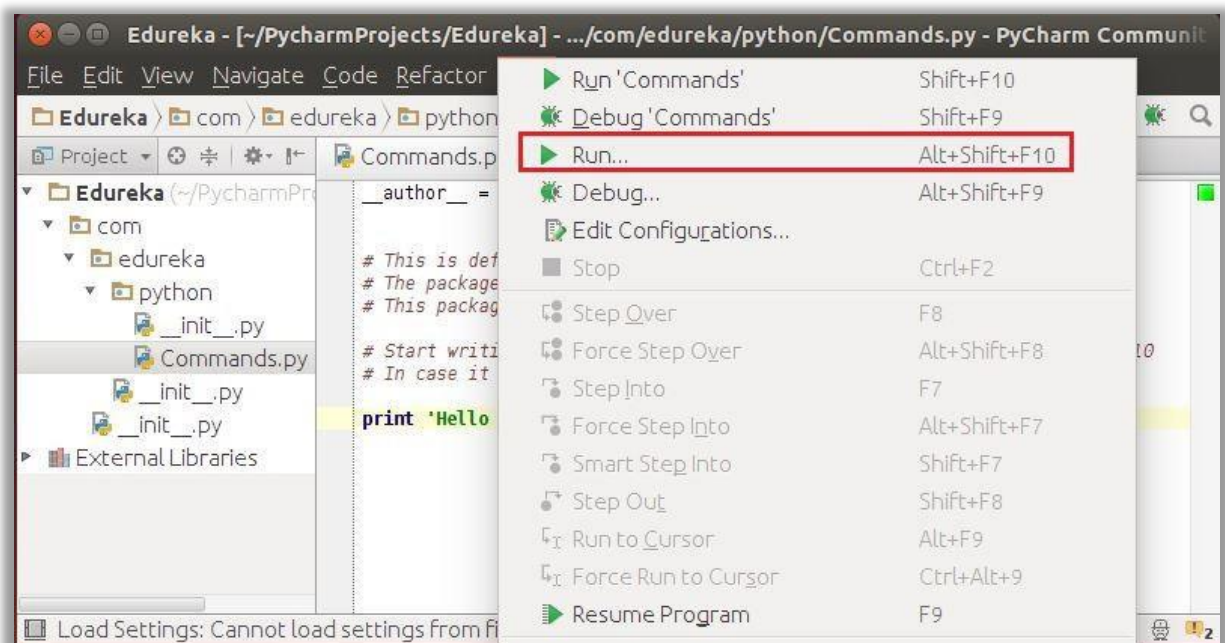

Step 8: Your Pycharm Community Edition 3.4 will open on which you will have to select “Commands.py” to start writing the commands.

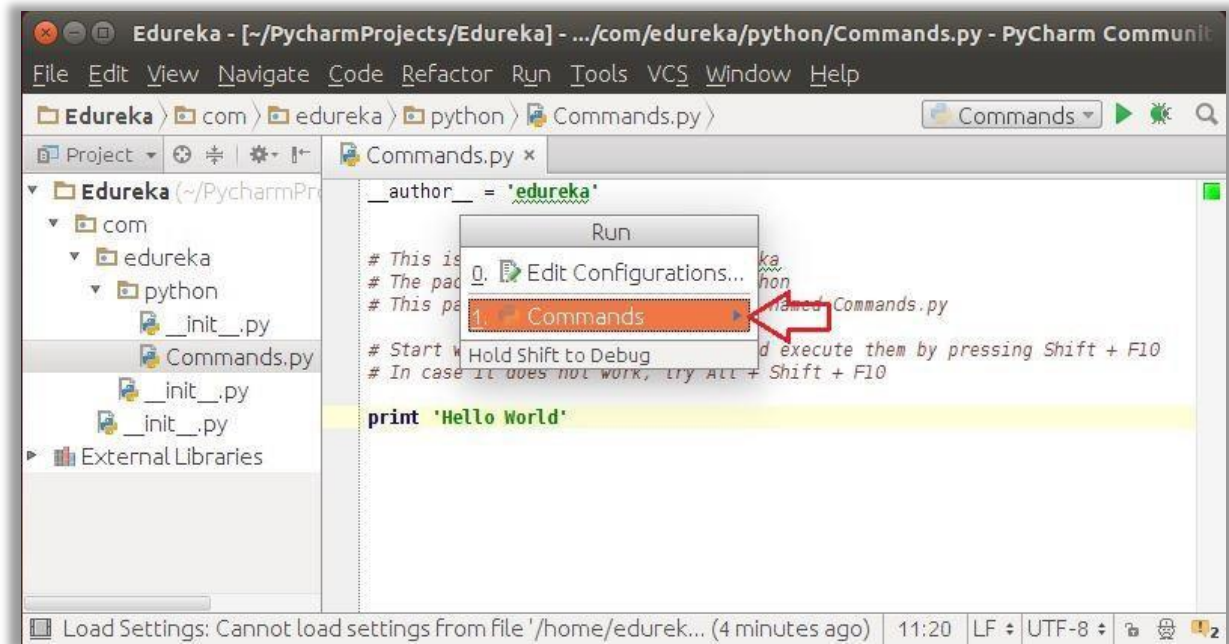

Step 9: Write: print 'Hello World'.

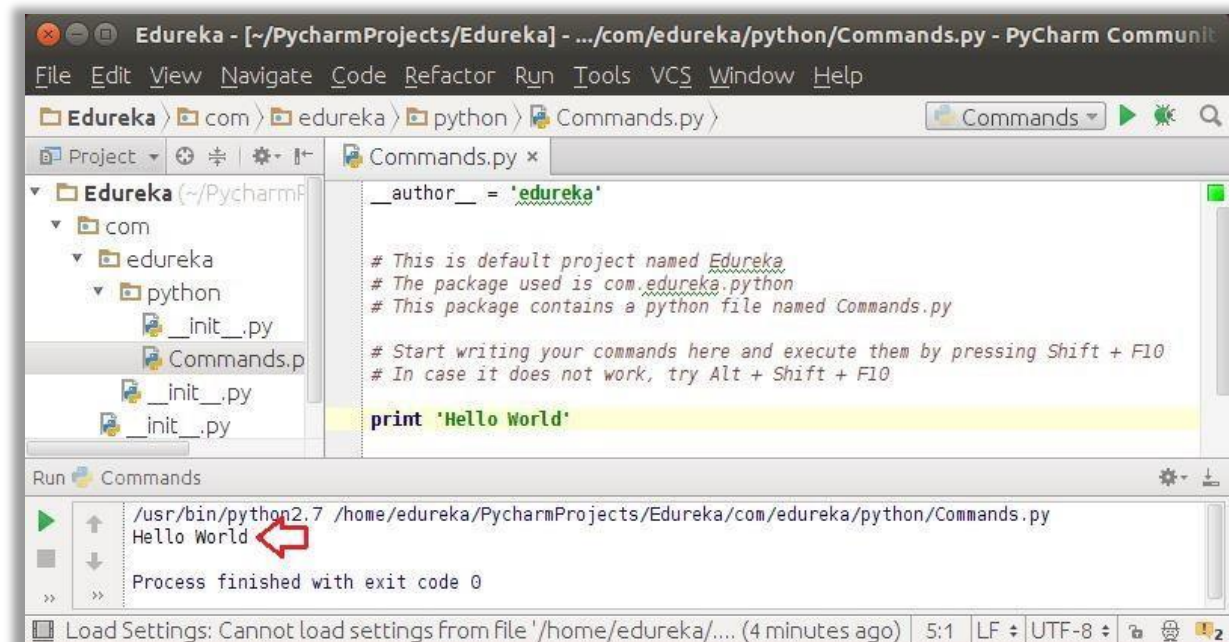

Step 10: Go to Run menu and click on Run or you can also Run by using Alt+Shift+f10.

Step 11: Click on “Commands”.

Step 12: As soon as you select Commands, you can see the output at the bottom of the screen.

Now your programs are up and running successfully 😊
