edureka!

Install VirtualBox

Step 1: Go to “Downloads”, select “VirtualBox-4.3.12” and “Open” by clicking on it.

Below pop up will be shown on your screen.

After the completion of verification the window shown below will appear on the screen.

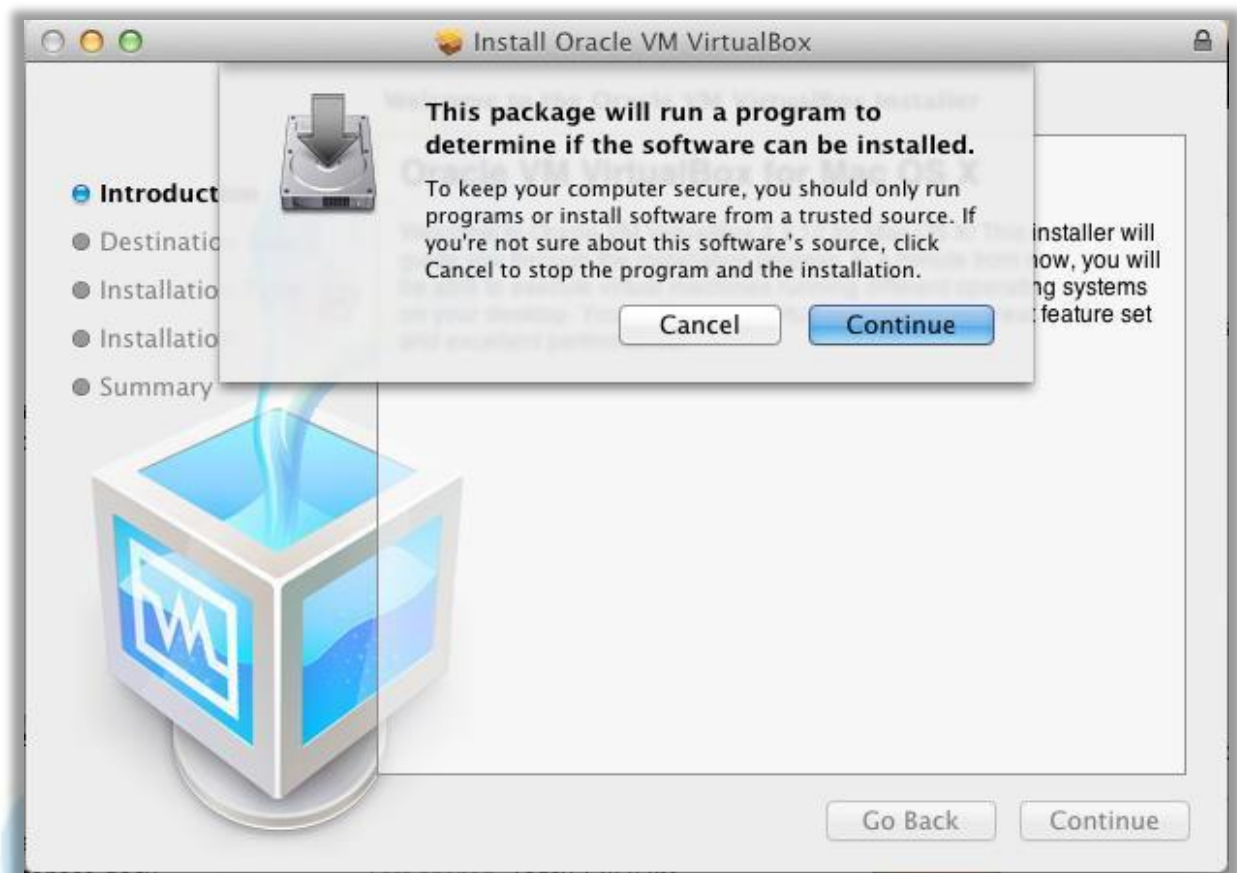

edureka!

Step 2: Double click on the icon of “VirtualBox.pkg”.

Step 3: Click on “Continue”.

Step 4: Click on “Continue”.

Step 5: You can change the installation location according to the space available on your system.

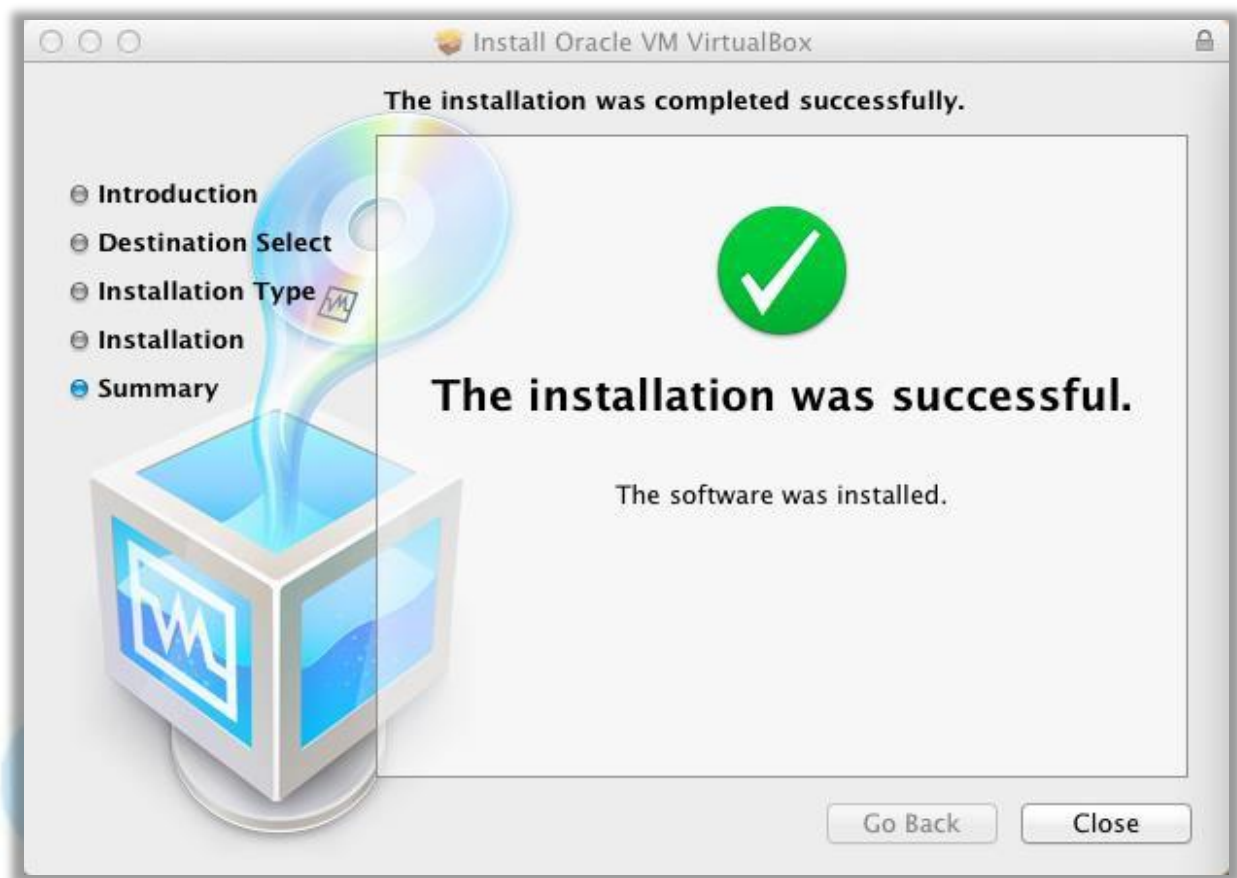

Click “Install”.

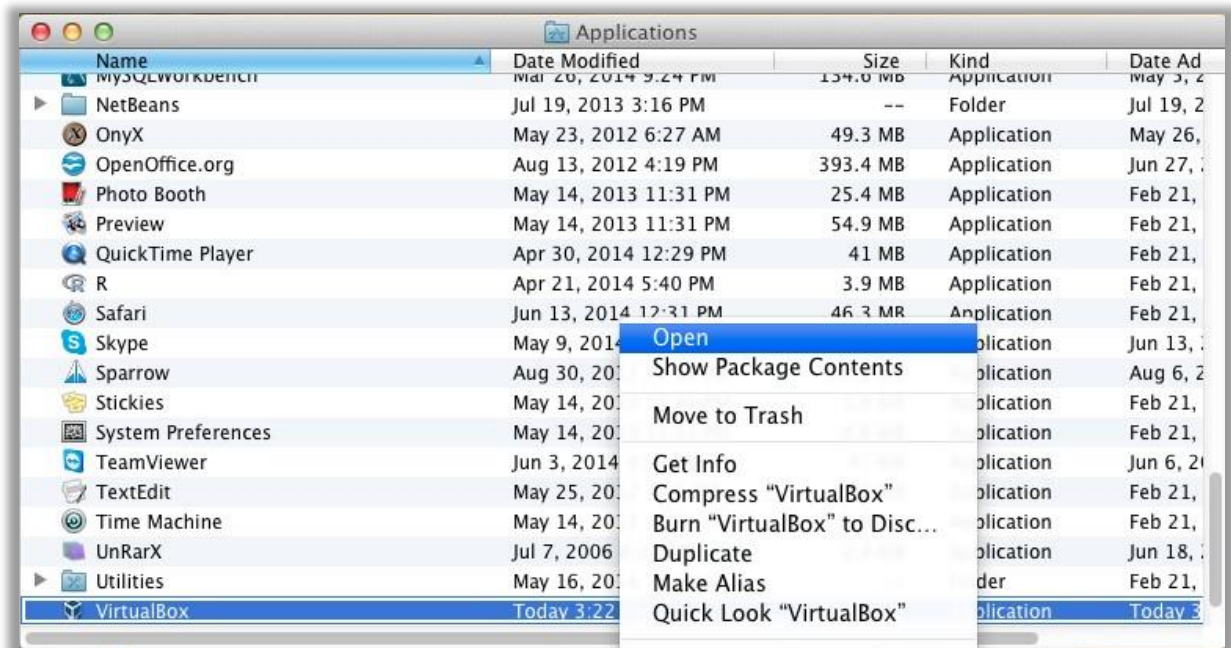

Windows shown below will appear on the screen.

Step 6: Click “Close” once the below windows will appear with the message “The installation was successful” appears.

Step 7: Open the applications and select VirtualBox and Open.

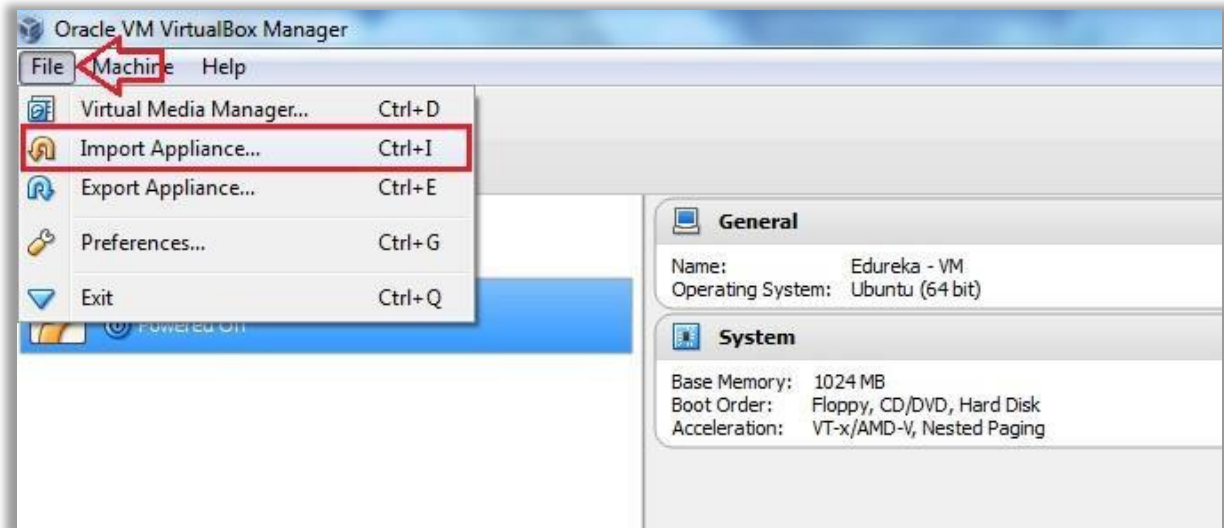

edureka!

Install Python VM

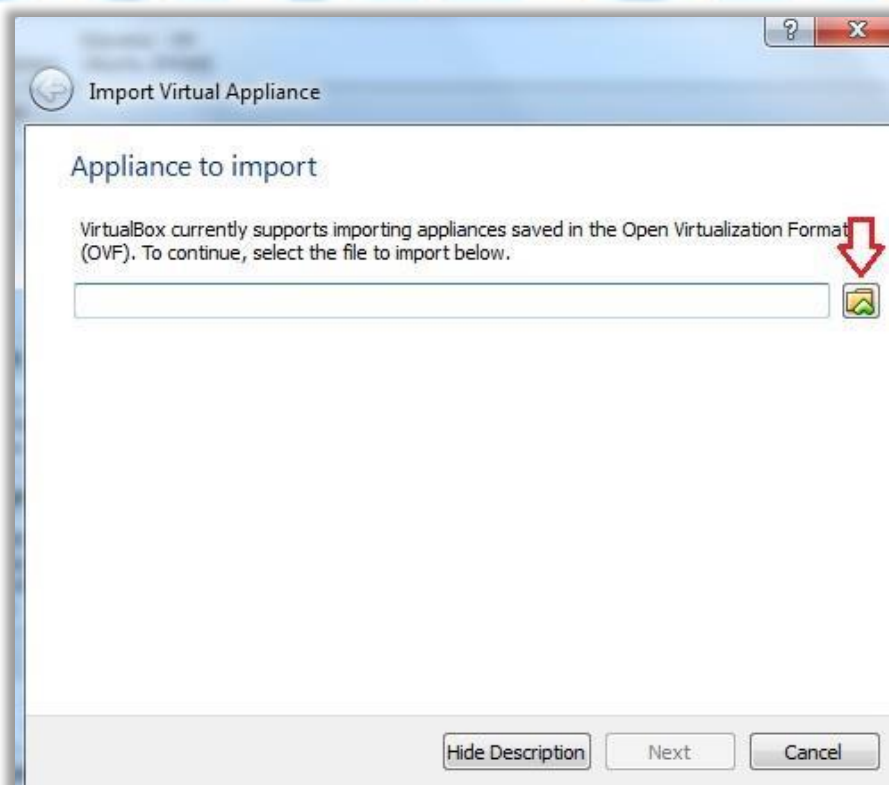

Step 1: Download Edureka_VM-Python from the link given below.

http://share.edureka.co/pydio/data/public/edureka_python_vm

Go to “File” menu of VirtualBox Manager and click on “Import Appliance”.

Step 2: On Import Virtual Appliance box click on the file menu to import Open Virtualization format file.

Step 3: Select “Edureka_VM-Python” and click on “Open”.

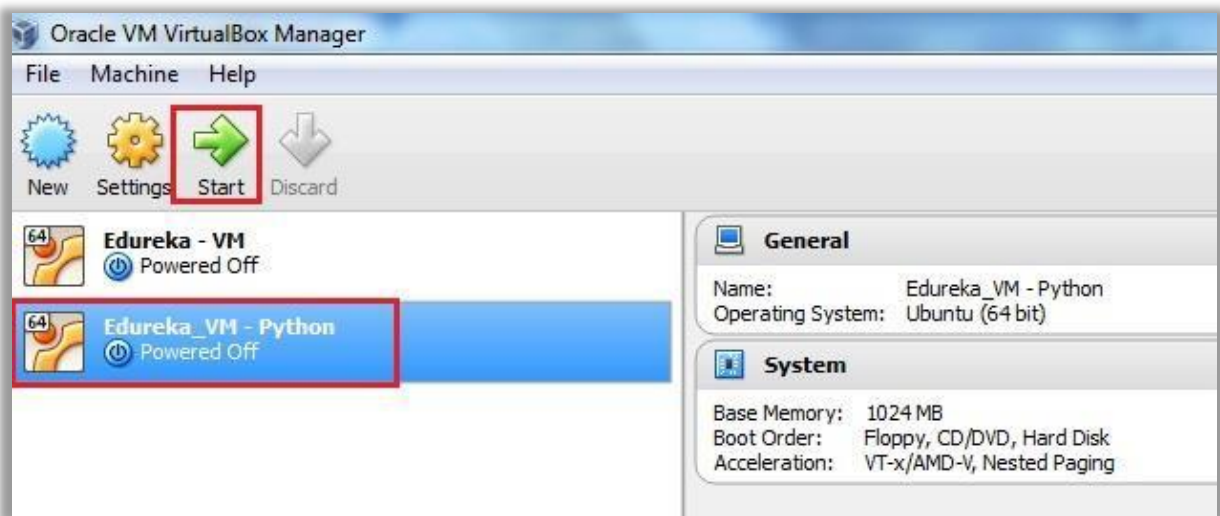

Step 4: After selecting the .ova file click on “Next”.

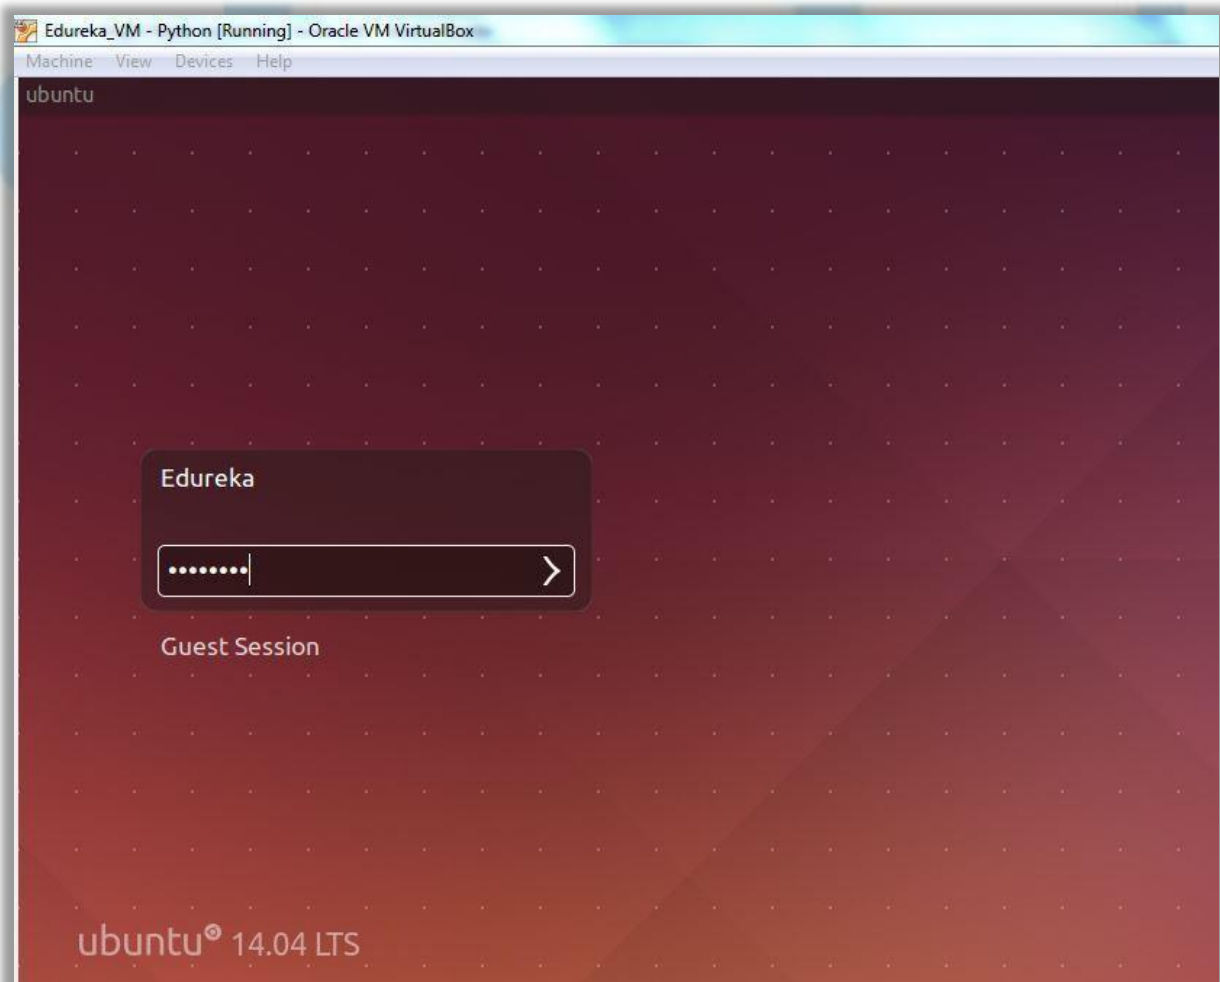

Step 5: Click “Import” on Appliance settings window.

Step 6: Select “Edureka_VM – Python” and click “Start”.

Step 7: Python VM will start on Oracle VM VirtualBox. You will have to write **edureka** in password field.

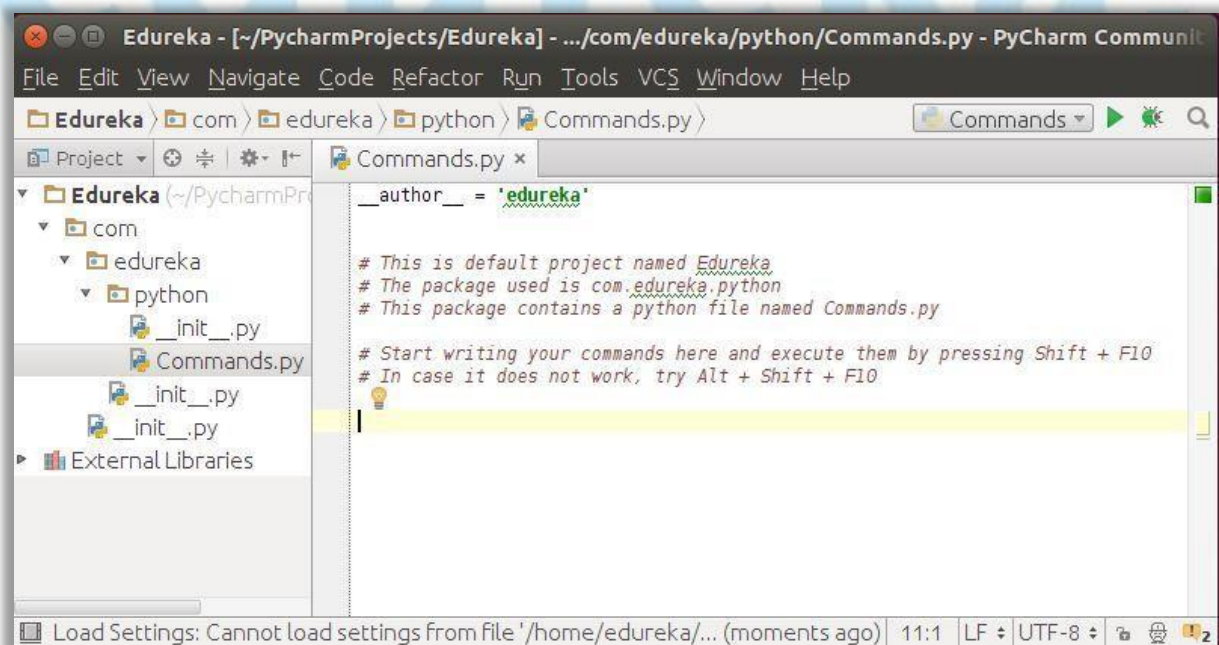

Step 8: Above screen will appear on which you will have to click on Python VM which will be available on the left hand side menu.

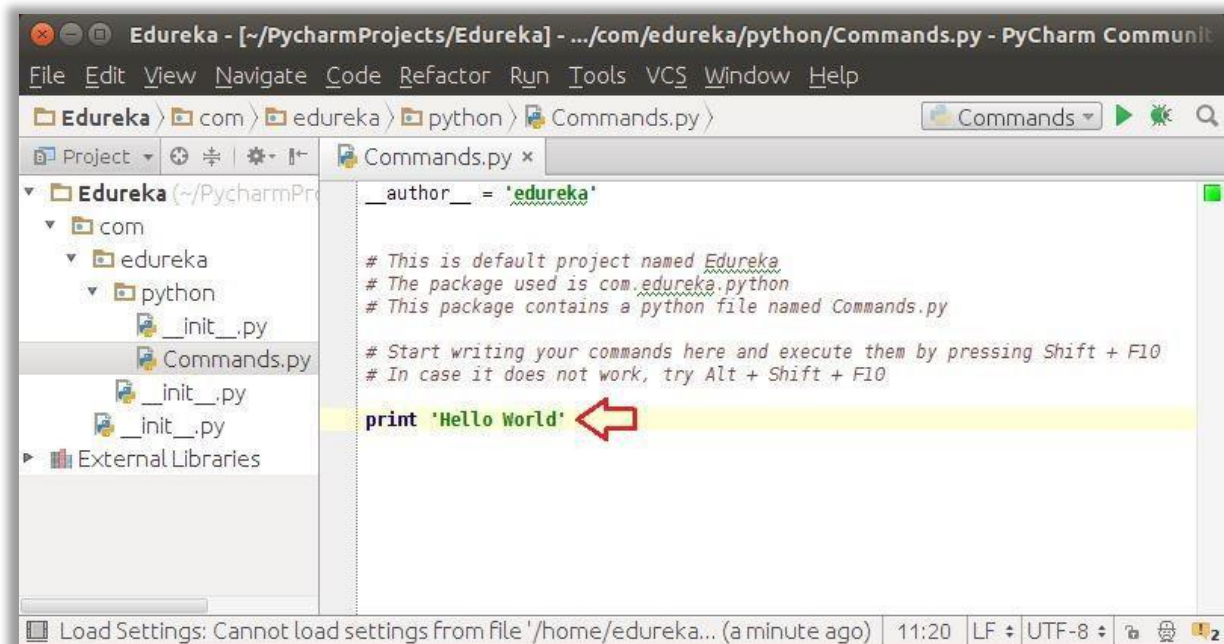

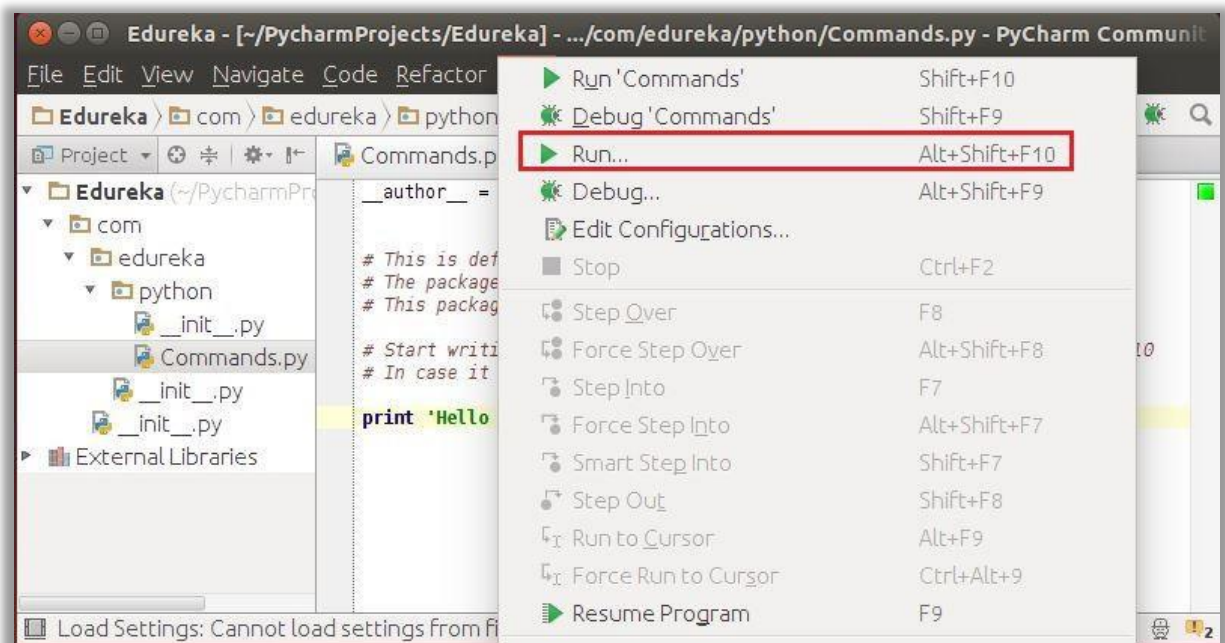

Step 9: Your Pycharm Community Edition 3.4 will open on which you will have to select “Commands.py” to start writing the commands.

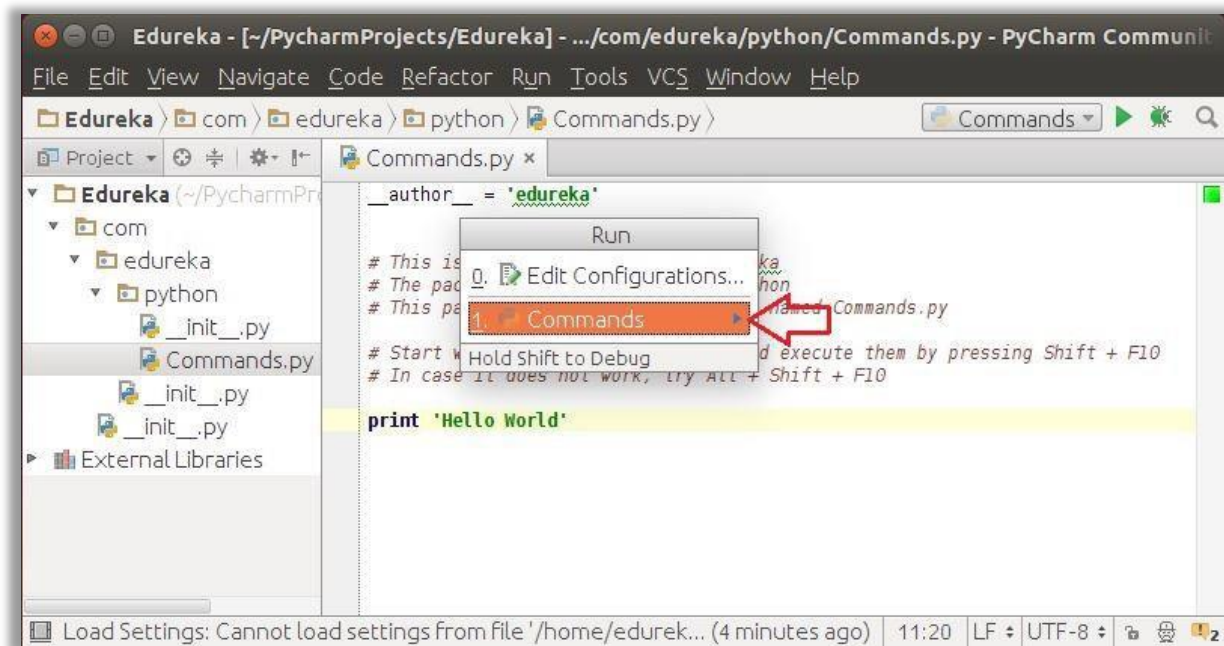

Step 10: Write: `print 'Hello World'`.

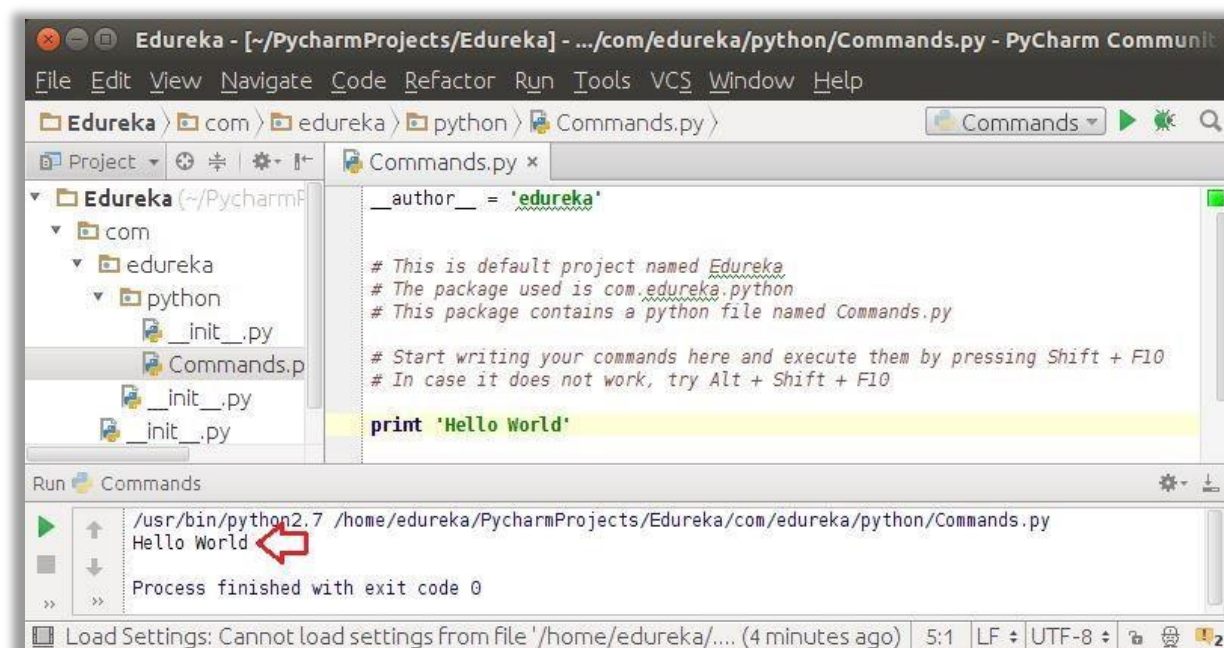

Step 11: Go to Run menu and click on Run or you can also Run by using Alt+Shift+f10.

Step 12: Click on “Commands”.

Step 13: As soon as you select Commands, you can see the output at the bottom of the screen.

Now your programs are up and running successfully.
